Specific to information in the Fact Sheet: Portfolio Attributes:

For Sundaram BNP Paribas Money Fund and Sundaram BNP Paribas Bond Saver, the portfolio attributes indicated are features that would normally be adhered to. There could also be changes if there are significant shifts in underlying of the fixed-income market. **Disclaimer for dividend:** Dividend is declared on the face value of Rs 10 per unit. After declaration and payment of dividend (including re-investment), the ex-dividend NAV will decline to the extent of the dividend payment. **Exposure to derivatives:** The value indicated for derivatives represents the exposure to equity through to index futures, index options, stock futures and stock options. The margin may be only a proportion of the exposure and to the extent, it is lower, cash in the fund's accounts will be higher. **Portfolio Weights & NAV:** Stock and sector weights have been rounded to one-decimal place and so may not add exactly to 100. NAV information in this document is as on May 31, 2010 unless otherwise specified. Returns are based on NAV as of May 31, 2010 **Returns:** As per the SEBI standards for performance reporting, "since inception" returns are calculated based on Rs 10 invested at inception of the funds. For this purpose the inception date is deemed to be the date of allotment. Returns are computed using NAV of the Growth Option where a separate Dividend and Growth option is available from inception and an adjusted-series of NAV for Sundaram BNP Paribas Growth Fund and Sundaram BNP Paribas Tax Saver for dividends declared before separate Dividend & Growth Options were introduced. Returns for period in excess of one year is on a compounded annual basis; the returns are net of fees and expenses but before taking into effect of entry load. Returns to investors may be lower to the extent of entry load and timing of investment in the fund. **Returns are net of fees and expenses.** Past performance may or may not be sustained in future and the numbers should not be used as a basis for comparison with other investments.

Performance Analysis are on an annualized basis as of May 31, 2010. Computation is based on the month-end NAV of the fund, designated benchmark and S&P CNX 500. The risk free rate is 7.651% per annum based on the upper band of 10 year T-Bill yield.

Data Source: Bloomberg; Computation: In-house

Pending deployment of funds in terms of the investment objective, the funds may be invested in short-term deposits with scheduled commercial banks in accordance with applicable SEBI guidelines.

Scheme-Specific Risk Factors:

Applicable for all funds: Change in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors.

Applicable to equity schemes (except Sundaram BNP Paribas Tax Saver and Sundaram BNP Paribas Select Thematic Funds Energy Opportunities): For any overseas investments in the equity funds, country risk, currency risk and geopolitical risk, to name a few

Sundaram BNP Paribas Select Focus: Higher volatility due to a concentrated portfolio. **Sundaram BNP Paribas Select Mid Cap:** Lack of liquidity at times and volatility. **Sundaram BNP Paribas Select Small Cap:** Illiquidity risks are higher and may lead to higher impact costs. Impact costs are different from brokerage and custodian charges and not be minimised or eliminated. Unlisted equity can also affect liquidity. Prices may be more volatile. Greater sensitivity and vulnerability of smaller companies to changing economic conditions, lack of depth in management, difficulty in raising funds and be developing or marketing new

products or services, outdated technologies, lack of bargaining power with suppliers, low entry barriers and issues of transparency and corporate governance enhance risks associated with small-cap stocks. **Sundaram BNP Paribas Small and Medium Indian Leading Equities Fund (S.M.I.L.E) Fund:** Small-cap stocks are generally more illiquid. **Sundaram BNP Paribas Equity Multiplier:** Risk of non-diversification. **Sundaram BNP Paribas Select Thematic Funds Capex Opportunities:** Long gestation periods; pace at which investments materialize; incidence of taxation, government policy & firm-level inefficiency. **Sundaram BNP Paribas Select Thematic Funds Rural India Fund:** Vagaries of nature such as erratic monsoon, failure of crop & drought, to name a few; cyclical / seasonal factors. For any overseas investments relevant to rural-theme: country risk, currency risk and geopolitical risk. **Sundaram BNP Paribas Select Thematic Funds Energy Opportunities:** Delays and slower pace of commercialisation of gas and oil finds; Government policy on pricing and distribution of petro-products; Significantly lower commercial output in relation to the size of the oil or gas discovery; Regulatory hurdles that impede growth and take more-than reasonable time frames to be sorted out; Geo political developments and government intervention in Pricing; Slower-than-expected pace of development and usage of oil and gas in user industries could impact the performance. **Sundaram BNP Paribas Select Thematic Funds Financial Services Opportunities:** The risks associated with the thematic portfolio will be lower than that of a sector-specific fund and higher than that of a typical diversified fund. Factors that could impinge on performance include changes in interest rates in India and overseas markets, changes in regulatory framework applicable to companies in financial services, government policy on ownership, savings patterns and deployment of such savings and levels and trends in capital market activity. Tax-free status for long-term capital gains and dividend will depend on the fund investing at least 65% in equity to qualify in accordance with provisions of the Income-Tax Act. If and to the extent, the portfolio includes overseas stocks, investors will be exposed to country risk, currency risk, geo-political risk, legal restrictions and regulation changes in geography other than India. As a thematic fund, there is risk of concentration. **Sundaram BNP Paribas Select Thematic Funds Entertainment Opportunities:** The risks associated with the thematic portfolio will be lower than that of a sector-specific fund and higher than that of a typical diversified fund. As the scheme will invest primarily in entertainment space, performance could be impacted by factors such as a dramatic slowdown in consumer spend, high taxes, if any, imposed by the government and changes in regulatory environment, to name a few. As the scheme may take concentrated exposures the NAV volatility will be higher than that of a typical diversified equity scheme Tax-free status for long-term capital gains and dividend will depend on the fund investing at least 65% in equity to qualify in accordance with provisions of the Income-Tax Act. If and to the extent, the portfolio includes overseas stocks, investors will be exposed to country risk, currency risk, geo-political risk, legal restrictions and regulation changes in geography other than India. As a thematic fund, there is risk of concentration. **Sundaram BNP Paribas Select Thematic Funds PSU Opportunities:** Geo-political developments. As the schemes will invest in the instruments of public sector companies, it will be affected by the government policies on PSU. As a thematic fund, there will be concentration risk compared to a diversified fund. For any overseas investments in the equity funds, country risk, currency risk and geopolitical risk, to name a few. The Scheme may use techniques such as interest rate swaps, options on interest rates, futures and forward rate agreement and other derivative instruments that are / may be permitted under SEBI/RBI Regulation. These techniques and instruments, if imperfectly used, have the risk of the Scheme incurring losses due to mismatches, particularly in a volatile market. **Sundaram BNP Paribas Global Advantage:** Currency risk, country risk, geo-political risk and emerging markets risk. **Sundaram BNP Paribas Money Fund:** Sundaram BNP Paribas Money Fund is a Money Market Scheme. Changes in the prevailing rates of interest are likely to affect the value of the scheme's holdings and consequently the value of the scheme's Units. The scheme may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. Usage of derivatives will expose the plans to certain risks inherent to such derivatives. **Sundaram BNP Paribas Ultra Short-Term Fund:**

Sundaram BNP Paribas Ultra Short-Term Fund is not a Money Market Scheme. Changes in the prevailing rates of interest are likely to affect the value of the scheme's holdings and consequently the value of the scheme's Units. The scheme may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing and trading, as permitted under the Regulations and guidelines. Usage of derivatives will expose the plans to certain risks inherent to such derivatives. **Sundaram BNP Paribas Bond Saver:** Changes in the prevailing rates of interest are likely to affect the value of the scheme's holdings and consequently the value of the scheme's Units. **Credit Risk:** Credit Risk refers to the risk of default in interest (coupon) payment and /or principal repayment. All debt instruments except those issued by the Government of India carry this risk. **Price Risk:** As long as the Scheme will be invested, its Net Asset Value (NAV) is exposed to market fluctuations, and its value can go up as well as down. The portfolio of fixed-income securities that the Scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. In general, price of fixed-income securities go up when interest rates fall, and vice versa. **Market Risk:** The Scheme may also be subject to price volatility due to such factors as interest sensitivity, market perception or the creditworthiness of the issuer and general market liquidity. Risk associated with securitised debt is similar to the listed factors.

General Risk Factors: All mutual funds and securities investments are subject to market risks, and there can be no assurance or guarantee that fund's objectives will be achieved. NAV may go up or down, depending on the factors and forces affecting the securities market. Main types are market risk, liquidity risk, credit risk and systemic risks. At times, liquidity of investments may be impaired. There is uncertainty of dividend distribution and risk of capital loss. Past performance of the Sponsor/Asset Management Company/Fund does not indicate the future performance. Investors in the schemes are not being offered any guaranteed or indicated returns. The names of the schemes do not in any manner indicate either quality or future prospects and returns.

NAV-based returns have been used in calculating all the numbers in 'Performance Analysis' table.

Help Guide for Performance Analysis

Mean Monthly Return: This is the average of monthly returns since launch.

Standard Deviation: This indicator tells how the monthly/weekly returns as the case may be are deviating from the mean returns of the fund and is calculated for the same period as mean returns. This gives an indication of the volatility in the returns of the fund. This indicator hence should be read in conjunction with Mean returns and not to be used alone.

Beta: This measure is also calculated basing on the monthly returns. It considers the benchmark returns and finds out the extent to which fund moved in relation to benchmark. For example, a figure of 0.9, means that if index falls by 1%, this fund's NAV should decline by 0.9%

Sharpe: This ratio is a measure of the fund's risk-adjusted returns per unit of risk (risk measure used is standard deviation). It is calculated by deducting the risk-free rate of return from the average monthly returns and dividing the result by the standard deviation. In general, higher the Sharpe ratio, the better it is as an indicator of risk-adjusted returns.

Sortino: This ratio is a measure of the fund's risk-adjusted returns per unit of down-side risk (down-side risk measure used is standard deviation of falls in excess of risk-free return). Sortino ratio is calculated by deducting the risk-free rate of return from the average monthly returns and dividing the result by the down-side risk. In general, higher the Sortino ratio, the better it is as an indicator of risk-adjusted returns.

Treynor Ratio: This ratio is a measure of the fund's risk-adjusted returns per unit of market risk (risk measure used is beta). It is calculated by deducting the risk-free rate of return from the average monthly return and dividing the result by the beta of the fund.

Alpha: It is the excess return generated by the fund above its expected rate of return. The expected rate or return is the return of the index multiplied by the beta.

Correlation: This number shows the relationship between the returns of the fund and benchmark. If the ratio is 0, it means there is no relationship between them and if it is 1, it means the two move in tandem. This ratio is also calculated for the same period as of mean returns.

Tracking error: This is a measure of how closely a portfolio follows the index to which it is benchmarked. It measures the standard deviation of the difference between the portfolio and benchmark returns. Tracking error (also called active risk) is a measure of the deviation from the benchmark. An actively managed portfolio would normally have a higher tracking error. If tracking error is measured historically, it is called 'realised' or 'ex post' tracking error. If a model is used to predict tracking error, it is called 'ex ante' tracking error. The former is more useful for reporting performance, whereas ex ante is generally used by portfolio managers to control risk

Information Ratio: This is a measure the excess return of the fund over the benchmark by the amount of risk the manager takes relative to a benchmark. Risk measure to compute information ratio is tracking error.

Turnover: This ratio measures churn or portfolio turnover. This is calculate by dividing the lower of purchases or sales by the average daily assets for the chosen period.
